

Non-Contact Infrared Thermometer

This non-contact infrared thermometer accurately measures surface temperatures from a distance. It features a digital display, laser targeting, and adjustable settings for precise and safe temperature monitoring.

Product Overview

Professional Non-Contact Infrared Thermometer

This high-precision infrared thermometer is designed for safe and efficient surface temperature measurement from a distance. Featuring an ergonomic design for extended use, it incorporates advanced laser targeting to ensure accurate aiming at specific points. With adjustable emissivity settings and customizable high/low temperature alarms, this device provides versatile and reliable performance for diverse industrial and professional applications.

Technical Specifications

Laser Class

Class 2

Sensor Technology

Non-contact infrared

Laser Wavelength

650nm - 670nm

Default Emissivity

0.95

Features & Functionality

Alarm Settings

- High Temperature Threshold
- Low Temperature Threshold

Key Features

- Non-contact infrared sensor
- Laser targeting
- Adjustable emissivity
- Digital display
- Ergonomic handle

Supported Units

Celsius, Fahrenheit
