Product Overview

Non-Vented Fuel Cap with Overload Stop

This non-vented fuel cap features an integrated overload stop mechanism to ensure a secure, leak-proof seal for various fuel tank systems. Constructed using a durable stamping and riveting process, it is designed to withstand vibration, pressure, and temperature fluctuations in demanding environments. The design effectively prevents fuel leakage and vapor escape, promoting both environmental safety and fuel efficiency.

Technical Specifications

Key Features

Non-vented • Overload stop • Knurled edge • Leak-proof

Manufacturing Process

Stamping, Riveting

Sealing Component

Rubber gasket

Compatibility

Size Options

Available in multiple sizes to fit filler necks of all diameters
