Product Overview

Advanced Growth Substrate

This nutrient-rich organic growth substrate is designed to replace traditional sponges in hydroponic and indoor gardening setups. Engineered with a loose, porous structure, it ensures optimal root aeration while maintaining the perfect balance of water and nutrients. With built-in slow-release fertilization, it provides a hassle-free 'lazy mode' experience, requiring minimal maintenance and watering for up to several weeks.

Key Features

Key Benefits

- Contains slow-release fertilizer
- Optimal nutrient, air, and water ratio
- Loose design promotes root breathing
- Clean, soil-free composition
- Hydroponic system compatible
