

Nylon Backed Flap Disc

Flap discs with nylon backing pads are used for grinding, blending, and finishing metal surfaces. The nylon backing provides flexibility and conformability, allowing the disc to follow contours and irregular shapes.

Product Overview

Professional Grade Nylon Backed Flap Discs

These nylon backed flap discs are designed for efficient grinding, blending, and finishing of metal surfaces. Featuring a central nylon hub, they offer superior flexibility and conformability, making them ideal for working on contours and irregular shapes. The quick-change design ensures minimal downtime during disc swaps, while the abrasive flap construction provides a fast initial cut rate and a smooth, professional finish.

Performance Features

Key Benefits

- Quick change back up pads for reduced downtime
- Fast initial cut rate
- Smooth cutting action
- Excellent final surface finish
- High conformability for irregular shapes

Applications

Common Industries

Metal Fabrication, Welding, Automotive

Primary Uses

Grinding, Blending, Finishing, Removing Welds, Deburring, Surface Preparation

Technical Details

Design Features

Nylon Backing • Overlapping Abrasive Flaps • Quick-Change Hub
