

Off-Road Vehicle Alloy Wheel

This alloy wheel is engineered for off-road vehicles, providing durability and enhancing overall appearance. It supports a maximum load weight of 1100KG.

Product Overview

High-Performance Off-Road Alloy Wheel

The D3344 alloy wheel is specifically engineered for off-road vehicles, combining robust construction with a distinctive multi-spoke aesthetic. Featuring alternating black and silver accents and a simulated beadlock rim with visible bolt details, it is designed to withstand demanding conditions while enhancing vehicle appearance. This wheel is a reliable choice for professional buyers seeking durability and performance in rugged environments.
