

Off-the-Road Bias Tire with Deep Tread

This off-the-road bias tire is designed with a super deep tread. It provides enhanced wear and reliable traction for demanding applications.

Product Overview

Heavy-Duty Off-the-Road Bias Tire

This off-the-road (OTR) bias tire is engineered for demanding applications in construction and mining environments. Featuring a super deep tread design, it provides exceptional wear resistance and superior traction on loose or challenging surfaces. The reinforced construction and specialized compound ensure high stability, load-carrying capacity, and protection against cuts and abrasions for a long service life.

Bias Tire with Super Deep Tread for Enhanced Wear and Traction

- Super extra deep tread depth offers maximum wear
- Deep tread for long wear and improved traction
- Unique compound for long original tread life and advanced tear resistance
- Tough construction for enhanced impact and cut resistance support

The super extra deep tread design is optimized for maximum wear life and traction in harsh conditions.

Tread Characteristics

- Super extra deep tread depth for maximum wear
- Deep tread pattern for improved traction
- Unique compound for advanced tear resistance
- Tough construction for impact and cut resistance
