

Oil Drilling Power Generator Set

This generator set is designed to provide reliable power for oil drilling operations. It features a robust construction and advanced control systems for stable performance.

Overview

Designed for Extreme Environments

The 190 series generating sets are specifically engineered to provide robust and reliable power for demanding oil drilling operations. Featuring heavy-duty construction and advanced control systems, these units ensure stable electricity output even in the harshest field conditions. With a focus on durability and operational efficiency, this system is an ideal solution for critical oilfield power requirements.

Technical Specifications

Key Components

- Multi-cylinder engine
- Advanced air filtration system
- Comprehensive control panel
- Multiple fuel filters
- Durable base frame

Series	190 Series
Primary Application	Oil Drilling, Heavy-Duty Power, Continuous Operation

Performance & Reliability

Operational Capabilities

190 ID

Series Designation

Durability Features

Heavy-Duty Construction • Harsh Environment Ready • Advanced Monitoring
