

Omnidirectional Rotating TV Antenna

This omnidirectional rotating TV antenna is designed to receive terrestrial television signals. It features a circular antenna element with two adjustable dipoles for optimal signal reception.

Product Overview

Versatile Omnidirectional Reception

This omnidirectional rotating TV antenna is engineered to deliver clear and reliable terrestrial television signals in diverse environments. It features a sophisticated circular element paired with adjustable dipoles to capture high-quality broadcasts. Designed for maximum flexibility, the base supports full 360-degree rotation to ensure optimal signal alignment and channel selection.

Technical Specifications

Rotation Range	360 degrees
Usage Environment	Indoor, Outdoor

Control and Connectivity

Tuning Interface	Manual tuning knob
Indicator	Yes
