

Online Industrial Frequency UPS

This online UPS features a sine wave structure for high efficiency. With an isolated transformer, it provides input and output voltage and over-voltage protection.

Product Overview

Industrial-Grade Reliability

This online industrial frequency UPS is engineered to provide continuous, high-quality power for sensitive electronic equipment during power outages or electrical fluctuations. It serves as a vital safeguard against data loss and hardware damage by delivering a seamless transition to battery backup. With its modular architecture, the system offers both scalability for growing infrastructure and ease of maintenance for long-term operational efficiency.

Certification Status

PUBLIC

Key Features

Core Capabilities

- Advanced power conditioning to neutralize surges and spikes
- Seamless transition to battery backup during outages
- Modular design for scalable infrastructure support
- High-reliability industrial performance
- Simplified maintenance protocols

Applications

Suitable Environments

Data Centers, Server Rooms, Industrial Facilities, Critical Infrastructure
