

Optical Fiber Cable for Broadcasting

This optical fiber cable is designed for radio and television broadcasting applications. It features a robust construction with a protective outer jacket, aramid yarn for tensile strength, and tightly buffered optical fibers.

Product Overview

Professional Broadcasting Optical Fiber

This optical fiber cable is specifically engineered to meet the demanding requirements of radio and television broadcasting environments. Its robust construction ensures high bandwidth and low signal loss during critical data transmissions. Designed for versatility, the cable performs reliably in both indoor and outdoor installations.

Construction & Durability

Structural Components

- Protective outer jacket
- Aramid yarn for tensile strength
- Non-metallic strength member
- Tightly buffered optical fibers

Application

Installation Compatibility

Indoor, Outdoor, Radio Broadcasting, TV Broadcasting

Performance

Key Technical Benefits

High Bandwidth • Low Signal Loss • Enhanced Durability
