

Optical Lens Instrument

This instrument is designed for use with optical lenses. It is suitable for various applications.

Product Overview

High-Efficiency Vertical Multistage Centrifugal Pump

This vertical multistage centrifugal pump is engineered for high-pressure fluid transfer and demanding flow rate requirements. Its vertical configuration optimizes floor space while simplifying installation in diverse settings. By utilizing multiple impellers arranged in series, the unit efficiently increases fluid pressure across successive stages, making it an ideal solution for water supply, pressure boosting, and industrial irrigation processes.

Technical Specifications

Key Components

- Motor
- Pump Head
- Impellers
- Diffusers
- Discharge Outlet

Pump Configuration

Vertical Multistage Centrifugal

Applications

Primary Applications

Water Supply, Pressure Boosting, Industrial Processes, Irrigation

Design Features

Key Design Advantages

Space Saving • Easy Installation • High-Pressure Output
