

Outdoor Network Communication Enclosure

This enclosure is designed to house and protect network communication devices in outdoor environments. It features a white metal frame with mesh panels for ventilation and is elevated on a platform for protection against environmental hazards.

Product Overview

Robust Outdoor Network Protection

This outdoor network communication enclosure is engineered to provide a secure and ventilated housing for sensitive electronic equipment. Constructed with a durable white metal frame and integrated mesh panels, it ensures optimal airflow while maintaining high security standards. The unit is elevated on a sturdy platform to protect critical network components from environmental hazards such as flooding or ground-level moisture.

Physical Design

Material	White metal frame
Ventilation	Mesh panel design
Mounting	Elevated platform mount

Security & Protection

Environmental Protection

Flood resistant • Weather resistant

Security Features	Unauthorized access protection, Environmental shielding
