

Pan Head Phillips Machine Screws

These machine screws feature a pan head with a Phillips drive. The pan head provides a large bearing surface, while the Phillips drive allows for easy installation.

Product Overview

Versatile Fastening Solution

These Pan Head Phillips Machine Screws are engineered for secure fastening in a wide range of industrial and mechanical applications. Featuring a distinct pan head design that offers a large bearing surface, they ensure stable and reliable connections. The standard Phillips drive allows for efficient installation using common tools, making them an ideal choice for machinery assembly and general maintenance tasks.

Technical Specifications

Finish

Zinc Plated • Corrosion Resistant

Head Type	Pan Head
Drive Style	Phillips
Material	Steel

Applications

Typical Applications

- Machinery components
- General fastening
- Industrial assembly
