

Passenger Minibus for Urban and Intercity Routes

This minibus is a versatile vehicle suited for passenger transport. Its design includes a high roof and multiple side windows, making it ideal for shuttle services, tour operations, and public transportation.

Overview

Versatile Passenger Transportation

This minibus is expertly engineered for both urban transit and intercity route requirements. Designed with a high roof configuration, it maximizes interior space and passenger comfort for various applications including shuttle services and tour operations. Its durable construction ensures reliable performance in demanding public transportation environments.
