

Pavement Cold Milling Machine

This cold milling machine is designed for efficient pavement removal and surface preparation. The machine features a robust cutting drum with replaceable teeth, allowing for precise milling depth and width control.

Product Overview

High-Performance Pavement Milling

This powerful cold milling machine is engineered for efficient pavement removal and precise surface preparation. Equipped with a robust cutting drum featuring replaceable teeth, it offers excellent control over milling depth and width. The unit combines a high-performance engine with an advanced hydraulic system to deliver superior power and maneuverability for demanding road maintenance, bridge rehabilitation, and airport runway repair projects.

Key Features

Primary Applications

- Road Maintenance
- Bridge Rehabilitation
- Airport Runway Repairs

Safety & Environment

Dust Suppression System, Operator Safety Focus

Technical Details

Core Components

Component	Description
Cutting System	Robust drum with replaceable teeth
Power System	High-performance engine
Hydraulics	Advanced hydraulic system
