

PE Insulated ACSR Overhead Conductor - 600V

This ACSR conductor is insulated with polyethylene for overhead distribution lines. It is installed on insulators and can be treated as a bare conductor.

Product Overview

High-Performance Overhead Conductor

This Polyethylene (PE) insulated ACSR conductor is engineered for reliable power transmission in overhead distribution lines. Featuring a concentrically stranded aluminum conductor reinforced with a steel core, it offers exceptional tensile strength and sag performance. The weather-resistant black polyethylene insulation ensures durability against environmental stressors, making it a robust solution for diverse electrical infrastructure needs.

Technical Specifications

Voltage Rating	600 V
Maximum Temperature	75 °C
Size Range	AWG #6 to 266.8MCM
Insulation Material	Weather resistant black polyethylene

Standards & Compliance

Standards Met	ASTM B 232, ANSI/ICEA-S-70-547
---------------	--------------------------------

Design Characteristics

Design Parameters

0.91 Emissivity	0.95 Absorption Coefficient	375 °C-CM/Watt-CM Thermal Resistivity
