

Peanut Butter Production Line

This automated line processes peanuts into peanut butter with variable capacities. It integrates roasting, grinding, and conveying equipment made with stainless steel and food-grade materials.

Overview

Professional Peanut Butter Production Solution

This industrial peanut butter processing line is engineered for efficient, continuous production of high-quality peanut butter. Designed for scalability, the system supports various production capacities including 100kg/h, 200kg/h, and 300kg/h to meet specific business requirements. The line features a robust construction using food-grade materials, including stainless steel for key components like roasters and grinders, ensuring consistent product quality and hygiene standards.

Production Capabilities

Capacity Options	100kg/h, 200kg/h, 300kg/h
------------------	---------------------------

Technical Specifications

Equipment Details

Equipment	Power (KW)	Dimensions (mm)
Roaster	118	4700*2900*1650
Front conveyor	0.75	5000*500*900
Cooling belt	8.1	10000*1200*1600

Material & Construction

Material Composition

- Roaster: Stainless steel
- Grinding machine: Stainless steel
- Conveyors: Stainless steel or food-grade rubber
- Other machines: Stainless steel contact parts, carbon steel frames
