

Peripheral Impeller Water Pump

This peripheral impeller pump is engineered for clean water transfer and pressure boosting. Its robust construction and efficient impeller design ensure reliable performance and quiet operation.

Product Overview

Efficient Clean Water Transfer

The DB series peripheral impeller pump is engineered for reliable clean water transfer and pressure boosting in both domestic and light industrial settings. Its robust construction and specialized impeller design ensure high efficiency and quiet operation during use. This compact solution is ideal for irrigation systems, general water supply, and applications requiring a dependable pressure boost.

Series Type

Technical Specifications

Pump Type	Peripheral Impeller
Suitable For	Clean Water, Domestic, Light Industrial, Irrigation, Pressure Boosting

Design & Construction

Key Design Features

- Robust construction for durability
- Efficient peripheral impeller design
- Compact footprint for easy installation
- Engineered for quiet operation

Operational Profile

Quiet Operation • Efficient • Compact
