

Peripheral Water Pump

This water pump is compact and efficient, designed for residential and light commercial use. Its peripheral impeller generates high pressure with relatively low flow rates, making it suitable for boosting water pressure in homes and irrigation systems.

Product Overview

High-Pressure Peripheral Pump

The Peripheral Water Pump features a specialized impeller with radial blades designed to rapidly transfer fluid motion within the pump body. Engineered for reliability and ease of use, this unit is an economical solution for applications requiring high pressure with controlled flow rates. Its robust construction ensures long-lasting performance and resistance to corrosion in various operating environments.

Technical Specifications

Key Benefits

- Reliable operation
- Economical design
- Simple installation
- Easy maintenance

Impeller Type

Peripheral with radial blades

Performance Features

High Pressure, Low Flow Rate, Corrosion Resistant

Application

Suitable Applications

Residential • Light Commercial • Water Pressure Boosting • Irrigation Systems
