

Peripheral Water Pump

This peripheral pump is designed for clean water transfer and pressure boosting applications. It features robust construction for durability and a long service life.

Product Overview

High-Performance Peripheral Pump

This peripheral pump is engineered for clean water transfer and pressure boosting applications. Its robust construction ensures durability and a long service life, making it a reliable solution for both domestic and industrial environments. Designed for efficient and quiet operation, it is well-suited for irrigation, washing, and various general-purpose water supply needs.

Applications

Primary Applications

Clean Water Transfer, Pressure Boosting, Domestic Water Supply, Industrial Use, Irrigation, Washing

Performance

Key Performance Characteristics

- High-performance fluid transfer
- Robust construction for durability
- Efficient operation
- Quiet performance
