

PET Preform Automatic Plastic Injection Molding Machine with Servo Motor

This automatic plastic injection molding machine is designed for producing PET preforms. It is equipped with a servo motor.

Product Overview

High-Efficiency PET Preform Production

This automatic plastic injection molding machine is specifically engineered for the high-speed production of PET preforms. Equipped with an advanced servo motor system, the unit delivers precise control over injection and clamping operations while significantly reducing energy consumption. It is a reliable solution for manufacturers seeking consistent quality and optimized cycle times in their preform molding processes.

Technical Specifications

Clamping Force

260 Tons

Clamping Force

Machine Type

PET Preform Automatic Injection Molding

Features

Drive System

Servo Motor • Automatic Operation

Primary Application

PET Preform, Plastic Injection, Precision Molding
