

Pharmaceutical Mixing and Dispensing System

This pharmaceutical equipment precisely mixes and dispenses materials. The system features a stainless steel hopper for storage, a mixing tank with a level indicator, and a control panel for automated operation.

Product Overview

Precision Mixing and Dispensing

This pharmaceutical-grade system is engineered for the precise mixing and dispensing of various materials. Featuring a robust stainless steel hopper and an integrated mixing tank with a level indicator, it ensures consistent quality control. The automated control panel and motor-driven agitator allow for efficient, thorough processing, making it an ideal solution for demanding pharmaceutical, chemical, and food processing environments.

Key Features

Core Components

- Stainless steel hopper
- Mixing tank with level indicator
- Automated control panel
- Motor-driven agitator
- Controlled discharge valve

Applications

Suitable Industries

Pharmaceutical, Chemical, Food Processing

Operational Capabilities

Operational Modes

Automated Operation • Controlled Dispensing
