

Pharmaceutical Pressure Vessel

This stainless steel pressure vessel is designed for pharmaceutical applications. It is suitable for filtration, sterilization, or storage of pharmaceutical liquids.

Product Overview

High-Performance Pharmaceutical Pressure Vessel

This stainless steel pressure vessel is precision-engineered for critical pharmaceutical applications, including liquid filtration, sterilization, and secure storage. Featuring a robust domed top design and integrated pressure monitoring, it ensures reliable performance under demanding processing conditions. The unit is equipped with multiple inlet and outlet ports with high-quality valves, supported by a stable leg structure for seamless integration into existing production lines.

Technical Specifications

Primary Applications

- Liquid Filtration
- Sterilization Processes
- Pharmaceutical Storage

Material Construction

Stainless Steel

Key Design Features

Domed Top, Pressure Gauge, Multiple Ports, Valve Integrated, Stable Support Legs
