

# Pillow Block Bearing Unit

Pillow block bearing units, also known as plummer block housings, are mounted bearings available in various configurations. These units are designed to provide shaft support where the mounting surface is parallel to the shaft axis.

## Product Overview

### Industrial Pillow Block Bearing

This pillow block bearing unit, also known as a plummer block, is engineered to provide reliable shaft support in industrial machinery. Designed for mounting surfaces parallel to the shaft axis, this unit ensures stable operation and ease of installation. It incorporates a precision-fitted bearing within a robust housing, making it a dependable choice for diverse mechanical equipment.

## Technical Specifications

### Configuration Codes

- B1
- W
- A

### Mounting Orientation

Parallel to shaft axis

<b>Model Series</b>	FG206
<b>Bearing Type</b>	Ball Bearing, Roller Bearing
