

Pilot Operated Pressure Reducing Valve

This pilot operated valve regulates pressure in fluid systems. It features a flanged connection and durable construction suitable for industrial environments.

Product Overview

Industrial Pressure Regulation

The Pilot Operated Pressure Reducing Valve is engineered for precise pressure control in demanding fluid systems. Featuring a robust flanged design and integrated pilot control, it ensures reliable and accurate operation under varying load conditions. This valve is built with high-durability materials to withstand harsh industrial environments, making it an essential component for complex piping infrastructure.

Technical Specifications

Key Features

- External copper control tubing
- Integrated pressure gauge for monitoring
- Precision calibration adjustment mechanism
- Heavy-duty industrial construction

Valve Type	Pilot Operated Pressure Reducing Valve
Connection Type	Flanged

Compliance & Quality

Application Standards	Industrial Grade, Fluid Control Systems
