

Planetary Gear Unit

Planetary gear units provide high reliability and are designed for high load applications. Their modular design ensures optimal performance with equal intensity and noise reduction.

Product Overview

High-Performance Planetary Gear Units

These planetary gear units are engineered for high-performance industrial applications requiring robust power transmission. Featuring a compact design, they offer exceptional torque density and efficient operation across a wide range of mechanical systems. Their durable construction and high-precision gearing ensure reliability in heavy-duty machinery, robotics, and complex automation environments.

Performance Metrics

Key Performance Metrics

192 Kw

Max Input Power

13000 N.m

Max Output Torque

Technical Specifications

Reduction Ratios	3.08 to 3460
Model Range	01 to 8
Input Power Range	0.02 - 192 Kw
Output Torque Range	1000 - 13000 N.m
