

# Plasma Cutter

This plasma cutter is designed for efficient metal cutting. It features adjustable amperage for different material thicknesses, a digital display for precise control, and built-in safety features.

## Overview

### Professional Grade Plasma Cutting

This compact and powerful plasma cutter is engineered for high-efficiency metal cutting across a variety of conductive materials including steel and aluminum. It features a digital display for precise amperage control, allowing operators to easily adjust settings for different material thicknesses. Designed for versatility, it is an ideal solution for automotive repair, light industrial applications, and detailed DIY projects.

## Performance

### Key Performance Metrics

**60 A**

Maximum Current

### Compatible Materials

Steel, Aluminum, Conductive Metals

## Control & Interface

### Control Features

- Digital display for precise monitoring
- Adjustable amperage selector
- Built-in safety protection systems

## Technical Specifications

### Application Scope

Automotive Repair • Light Industrial • DIY Projects

### Model Series

CUT-60

### Operating Voltage

Standard Voltage
