

Plastic Extrusion Machine

This multi-stage forming machine is designed for continuous operation. It is used for high-volume production of plastic pipes, profiles, and similar extruded products.

Overview

High-Efficiency Plastic Extrusion System

This robust plastic extrusion machine is engineered for high-volume, continuous production within the plastic and rubber processing industry. Designed with a heavy-duty frame and precision multi-stage forming heads, it is optimized for the reliable manufacturing of plastic pipes, profiles, and similar extruded components. The integrated control panel allows for precise operation and adjustment, ensuring consistent output quality for demanding industrial applications.

Technical Specifications

Key Features

- Robust industrial frame construction
- Multi-stage forming/processing heads
- Integrated control panel for precision adjustment
- Designed for continuous high-volume operation

Operational Mode

Continuous Operation • High-Volume Production

Primary Application

Plastic Pipes, Plastic Profiles, Rubber Processing
