

Plastic Film Blowing Machine

This plastic film blowing machine is designed for producing plastic films. It features an extrusion system, a film blowing tower with multiple rollers, and a control panel.

Overview

High-Efficiency Film Production

This industrial plastic film blowing machine is engineered for the plastic and rubber industry to produce high-quality films of varying thicknesses and widths. Featuring a robust metal frame construction, the unit includes a precision extrusion system and an integrated film blowing tower with multiple rollers for consistent output. The intuitive control panel allows operators to manage production parameters effectively, ensuring reliable performance for demanding manufacturing environments.

Technical Specifications

Key Components

- Extrusion System
- Film Blowing Tower
- Multi-roller System
- Control Panel

Industry Application	Plastic Industry, Rubber Industry
Construction Material	Robust Metal Frame
