

Plastic Film Extrusion Line

This packaging machinery appears to be a complete extrusion line for producing plastic film or sheeting. It consists of several integrated modules: a control panel, a twin-screw extruder with hoppers, a die head, a cooling and calibration unit, a haul-off system, and a winder.

Overview

High-Efficiency Plastic Film Extrusion Line

This comprehensive plastic film extrusion line is designed for the high-precision production of plastic film and sheeting. The system integrates multiple critical modules, including a twin-screw extruder for compounding, a specialized die head for shaping, and advanced cooling and haul-off units to ensure dimensional stability. It is an ideal solution for manufacturers seeking reliable, high-output packaging material production.

Technical Configuration

System Modules

- Control Panel
- Twin-screw Extruder with Hoppers
- Die Head
- Cooling and Calibration Unit
- Haul-off System
- Winder

Extrusion Technology

Twin-screw • Compounding • Film Extrusion

Application

Primary Applications

Plastic Packaging, Film Production, Sheet Production
