

Plastic Injection Molding Machine

This precision injection molding machine is designed for manufacturing plastic parts. It features a robust construction and efficient hydraulic system for reliable performance.

Overview

Precision Injection Molding Capability

The CSD-280W-D is a precision-engineered plastic injection molding machine designed to deliver reliable and consistent performance in industrial manufacturing environments. Built with a robust construction and an advanced control system, this machine ensures high productivity for a wide variety of plastic parts. Its efficient hydraulic system provides the necessary stability and precision required for demanding injection molding processes.

Technical Specifications

Model Number	CSD-280W-D
--------------	------------

Performance Metrics

Key Performance Metrics

280 Tons
Clamping Force

Features

Key Features	Advanced Control System, Robust Construction, Efficient Hydraulic System, High Precision
