

Plastic Injection Molding Machine

This injection molding machine is a high-performance and energy-efficient solution for producing plastic parts. It features a robust clamping unit, a precise injection system, and an advanced control system.

Overview

High-Performance Plastic Injection Molding

The BS series injection molding machine is a high-performance, energy-efficient solution designed for producing a wide range of plastic parts. It features a robust clamping unit and a precise injection system, ensuring excellent repeatability and reliability for industrial applications. Built with high-quality components, this machine is engineered for long-term durability and minimal maintenance requirements.

Performance & Efficiency

Energy Saving System

Servo-Hydraulic System • Energy-Efficient

Injection Performance

1 Type

High-Speed Injection Unit

Core Components

Key Machine Features

- Robust clamping unit
- Precise injection system
- Advanced control system
- User-friendly interface
- High-quality durable components

Operation

Control & Monitoring

User-friendly interface for easy operation and real-time monitoring

Applications

Application Scope

Plastic Part Production, Industrial Manufacturing, High-Repeatability Tasks
