

Plastic Product Manufacturing Line

This line is designed for manufacturing plastic products. It includes an extrusion system, cooling section, electrical control panel, and dual spool winding mechanism.

Overview

High-Efficiency Plastic Manufacturing Solution

This comprehensive plastic product manufacturing line is engineered for high-volume production and reliable material processing. The system integrates a robust extrusion unit with a precision cooling section and advanced electrical controls to ensure consistent product quality. Designed for seamless operation, the line features a dual spool winding mechanism that optimizes material handling and increases overall production throughput.

System Components

Key System Components

- Extrusion System
- Cooling Section
- Electrical Control Panel
- Dual Spool Winding Mechanism

Compliance & Standards

Certifications

Industrial Grade, CE Compliant, ISO Standardized
