

Pleated High Flow Filter Cartridge

Pleated high flow filters are constructed with polypropylene microfiber and are replacements for Parker high flow water filters. These filters can directly replace Parker Megaflo and Fulflo series filters in high flow water filtration systems.

Product Overview

High-Efficiency Filtration Solution

These pleated high-flow filter cartridges are engineered using advanced polypropylene microfiber to provide superior filtration efficiency and extended service life. Designed for high-flow applications, a single cartridge offers the treatment volume equivalent to 10 standard 40-inch filters, significantly reducing maintenance frequency and operational costs. The robust construction features a handle design and single or double O-ring end caps to ensure a secure, bypass-free installation.

Key Features

Performance Benefits

- High dirt holding capacity
- High flow rates with low pressure drops
- Wide chemical compatibility
- Easy installation and replacement
- Cost-effective solution compared to standard filters

Applications

Suitable Industries

Petrochemical, Food & Beverage, Power Plant Water Treatment, Paints & Inks, Desalination, Biopharmaceuticals
