

Pneumatic Internal Pipe Alignment Clamp

This pneumatic clamp is designed for the precise alignment of pipes during welding applications. It utilizes pneumatic power to expand, providing a secure and accurate fit for various pipe sizes and materials.

Product Overview

Precision Pneumatic Internal Alignment

The DKQ series pneumatic internal line-up clamp is a next-generation tool engineered for high-precision pipe alignment during welding operations. Designed to meet or exceed API standards, this clamp ensures exceptional technical stability and ease of operation in demanding industrial environments. Its internal expansion mechanism allows for unobstructed external welding, significantly enhancing both welding efficiency and joint quality.

Technical Specifications

Alignment Standard

API Standard Compliant

Pipe Size Range (Imperial)	8" - 10"
Pipe Size Range (Metric)	203mm - 254mm
Weight	75 kg
Pneumatic Configuration	8x2
