

Pneumatic System Component

This component is designed for use in pneumatic systems. It facilitates the control and regulation of air pressure within the system.

Overview

Versatile Storage Solution

This pneumatic system component is designed for efficient storage and organization in professional environments. Featuring a sturdy metal frame with adjustable height, it provides a reliable solution for managing apparel and accessories. Its compact design ensures it fits seamlessly into small spaces while maintaining high functional standards.

Physical Specifications

Frame Material	Metal
Adjustability	Yes

Features

Storage Features

- Adjustable height
- Two shelves for shoes and accessories
- Hanging bar for clothes

Design Benefits	Compact, Versatile, Adjustable
