

Polypropylene Self-Priming Centrifugal Pump

This pump is constructed from polypropylene for corrosion resistance. It is capable of suctioning fluids up to 3 meters and discharging them efficiently.

Product Overview

Corrosion-Resistant Fluid Transfer

The FPZ Series self-priming centrifugal pump is engineered for reliable performance in demanding industrial environments. Constructed from durable polypropylene, this unit offers exceptional resistance to corrosive chemicals, making it ideal for chemical processing, wastewater treatment, and agricultural irrigation. Its self-priming capability simplifies operation by eliminating the need for manual priming, while the robust design ensures a consistent flow rate and long service life.

Technical Specifications

Material	Polypropylene
Pump Type	Self-Priming Centrifugal
Key Features	Corrosion Resistant, Self-Priming, Centrifugal Design, Industrial Grade

Applications

Suitable Industries

- Chemical Processing
- Wastewater Treatment
- Agricultural Irrigation
- Agricultural Spraying

Maintenance

Ease of Service

Designed with the end-user in mind, this pump features easily accessible components for routine inspection and servicing. The use of high-quality, corrosion-resistant materials minimizes the frequency of maintenance, ensuring a long service life and reduced downtime in harsh operational settings.
