

Portable Abrasive Blaster

This abrasive blaster is designed for effective surface preparation. Its portable design includes a large capacity tank and multiple nozzles for versatile use on different surfaces.

Product Overview

Industrial-Grade Surface Preparation

This portable abrasive blaster utilizes high-speed particle projection to transform kinetic energy into efficient surface cleaning power. Designed for versatility, it is capable of handling particles with diameters ranging from 1-4mm to remove rust, paint, and industrial contaminants. Its robust construction and mobile design ensure reliable performance in professional automotive, industrial, and restoration environments.

Technical Specifications

Maximum Operating Pressure

150 PSI

Max Pressure

Abrasive Particle Size

4 mm

Features & Safety

Core Features

- Portable design with integrated wheels
- Transparent upper media container
- High-capacity tank for extended operation
- Multi-nozzle configuration

Safety Mechanisms

Pressure Relief Valve, Secure Sealing Mechanism

Applications

Typical Applications

Rust Removal • Paint Stripping • Automotive Restoration • Industrial Cleaning
