

Portable Concrete Vibrator

This portable concrete vibrator is designed for efficient concrete consolidation. Its robust construction and powerful internal combustion engine ensure reliable performance on construction sites.

Product Overview

High-Efficiency Concrete Consolidation

The portable concrete vibrator is engineered for high efficiency and reliable performance across various construction environments. Designed with a simple, robust structure, this unit is ideal for buildings, roads, bridges, and dam construction. It ensures high-quality results by effectively removing air pockets from freshly poured concrete, resulting in a denser and stronger final structure.

Technical Features

Core Advantages

- Portable and compact design
- Simple to operate
- High efficiency performance
- Low maintenance requirements
- Ideal for sites without electrical access

Engine Options

Diesel Engine (ZNR), Petrol Engine (ZPR)

Applications

Suitable Applications

Building Construction • Road Works • Bridge Construction • Port Projects • Dam Construction
