

Portable Engine-Driven Irrigation Sprinkler Set

This sprinkler set is a portable irrigation system powered by an internal combustion engine. It includes a pump, engine, and sprinkler head mounted on a frame for easy transport and efficient water distribution.

Product Overview

Professional Portable Irrigation Solution

This portable engine-driven irrigation sprinkler set is engineered for efficient water distribution in agricultural and landscaping environments. The self-contained unit features a robust internal combustion engine coupled with a high-performance pump to ensure reliable pressurization. Designed for mobility, the system allows operators to set up and manage irrigation across various locations without the requirement for fixed plumbing infrastructure.

Technical Specifications

System Configuration	Portable Engine-Driven Pump and Sprinkler
Power Source	Internal Combustion Engine
Primary Applications	Agriculture, Landscaping, Crop Irrigation

Key Features

Design Advantages

- Integrated engine-driven pump system
- Portable frame for rapid deployment
- Independent of fixed water supply infrastructure
- Even water distribution coverage
