

Portable Fluid Transfer Pump

This is a portable pump designed for fluid transfer. It features a robust engine with a cooling fan, mounted on a tubular frame with rubber feet for stability.

Overview

Portable Fluid Transfer Solution

Designed for field operations and demanding environments, this portable fluid transfer pump offers reliable performance and mobility. Built on a robust tubular frame with stabilizing rubber feet, the unit is engineered to withstand rigorous use. Its high-efficiency engine configuration ensures consistent operation, making it an essential tool for fluid management in remote or mobile applications.

Technical Specifications

Engine Components

- Integrated cooling fan
- Protective grill housing
- Fuel tank
- Air filter / Oil bath air cleaner

Design & Construction

Portable Design, Tubular Frame, Anti-Vibration Feet, Field-Ready

Frame Material

Gray tubular steel frame
