

Portable Gasoline Generator

This portable gasoline generator provides electrical power in remote locations or during power outages. It is equipped with an internal combustion engine and an electrical generator to convert mechanical energy into electrical energy.

Overview

Portable Power Solution

This portable gasoline generator is designed to provide reliable electrical power in remote locations or during unexpected power outages. Built with a robust frame for enhanced protection and portability, it efficiently converts mechanical energy into electrical energy. The unit includes an integrated control panel with multiple outlets and performance indicators, making it suitable for powering various essential electrical devices and equipment.

Technical Specifications

Rated Power Output

2700 W

Rated Power

Model Series	TG 3500
Power Source	Gasoline

Features

Key Design Features

- Robust protective frame
- Portable design
- Integrated control panel
- Performance monitoring indicators

Ideal Use Cases	Remote locations, Emergency power, Outdoor equipment, Backup power
