

Portable Induction Sealing Machine

This portable induction sealing machine is designed for sealing containers using non-contact induction heating. It is suitable for industries such as pharmaceuticals, agricultural chemicals, cosmetics and lubricant.

Product Overview

Compact Induction Sealing Solution

The Portable Induction Sealing Machine utilizes electromagnetic induction to produce instant heat, effectively melting and sealing aluminum foil to container openings. This process creates a hermetic seal that is wet-proof, fungus-proof, and tamper-evident, significantly extending the preservation cycle of your products. Designed for versatility, it is compatible with a wide range of bottle materials including PE, PP, PET, PS, ABS, and glass.

Technical Specifications

Electricity Supply	220V 50Hz
Power Consumption	500 W
Production Capacity	12-28 pcs/min
Sealing Diameter	16-60 mm
Vessel Height	No limitation

Physical Attributes

Dimensions	264 x 270 x 98 mm
Weight	4 kg

Compatibility

Incompatible Materials

- Metal bottle bodies
- Metal bottle caps

Compatible Bottle Materials	PE, PP, PET, PS, ABS, Glass
