

Portable Long Hole Core Drill

This core drill is designed for drilling long holes in walls, floors, roofs, and road surfaces, with a maximum drilling diameter of 255mm. It is suitable for use on various materials such as reinforced concrete and brick.

Overview

Portable Long Hole Core Drill

The OKHZ-100 is a versatile, portable core drilling machine designed for professional applications in construction, plumbing, and electrical installation. It offers high efficiency for cutting through reinforced concrete, rock, and stone, featuring a sturdy base with rack-and-pinion adjustment for precise height control. With its multi-functional capability, it serves as an essential tool for deep hole drilling and specialized core sampling projects.

Technical Specifications

Rated Voltage	110/220/240V
Rated Frequency	55 Hz
Rated Input Power	1450 W
No-load Speed	2100 r/min
Maximum Drilling Diameter	100 mm
Weight	6 KG

Features

Advanced Performance Features

- Stable hydraulic components for reliable performance and long service life
- 4-wheel chassis mount for rapid and convenient mobility
- Wide range of rotary speeds for carbide and diamond bit compatibility
- Integrated water cooling arrangement
- Electrical leakage protection for operator safety

Applications

Suitable Materials	Reinforced Concrete, Rocks, Stones, Tiles, Bricks
