

Portable Satellite Phone

This satellite phone is a portable communication device for use in remote areas. It provides voice and data connectivity through the Inmarsat Broadband Global Area Network (BGAN).

Overview

Reliable Global Connectivity

The BGAN727 is a robust portable satellite communication device engineered for mission-critical operations in remote locations. It provides seamless voice, messaging, and high-speed data connectivity by leveraging the Inmarsat Broadband Global Area Network. Designed for durability, this unit ensures reliable communication where terrestrial networks are non-existent.

Technical Features

System Components

- Integrated Antenna Unit
- Dedicated Transceiver
- Professional Handset

Supported Services

Voice Calls, High-Speed Internet, Messaging

Operational Capabilities

Build Quality

Ruggedized for Outdoor Use

Coverage
