Product Overview

Clean Energy for Off-Grid Living

This intelligent hybrid energy storage system provides a stable, portable solution for off-grid power needs. By integrating solar energy capture, city power grid input, and high-capacity battery storage, it ensures a seamless supply of green energy. Designed for ease of use, it features an intuitive LED display for real-time monitoring of system status and performance.

Technical Specifications

Power Output Range

1 kW Minimum Power	5 kW Maximum Power
------------------------------	------------------------------

Core Components

Hybrid Energy Storage, Foldable Solar Panels, Integrated Inverter, Lithium Battery Unit, AC Input Port

Operational Capabilities

Power Input Sources

- Solar Energy
- City Power Grid

Interface

LED screen for system running status monitoring

Application

Recommended Use Cases

Camping • Outdoor Activities • Emergency Backup • Remote Households
