

Portable Spectrum Analyzer for Wireless Base Stations

This portable spectrum analyzer is designed for field use in wireless base station installation and testing. It features a user-friendly interface with a large display for visualizing signal characteristics, including frequency, amplitude, and modulation.

Product Overview

Professional Wireless Testing

This portable spectrum analyzer is engineered specifically for field use during wireless base station installation and maintenance. The device offers a comprehensive interface to visualize critical signal characteristics such as frequency, amplitude, and modulation. Its rugged design ensures durability for on-site troubleshooting and network optimization in demanding field environments.

Key Features

Primary Capabilities

Signal Analysis, Interference Detection, Network Optimization, Ruggedized Design

Technical Specifications

Supported Standards

- Wireless communication standard support
- Frequency analysis
- Amplitude measurement
- Modulation analysis

Build Quality

Portable • Field-Ready • Ruggedized
