

Positive Displacement Gear Pump

This positive displacement gear pump is engineered for reliable performance and extended service life. It is suitable for transferring fluids with varying viscosities and is used in fuel injection, lubrication, and hydraulic power units.

Product Overview

High-Efficiency Gear Pump

The DG-4 positive displacement gear pump is engineered for robust industrial performance and long-term reliability. Designed to handle fluids with varying viscosities, this unit ensures consistent flow rates and stable pressure output. It is an ideal solution for critical applications such as fuel injection systems, lubrication circuits, and hydraulic power units.

Technical Specifications

Model	DG-4
Secondary Model Designation	YD480 ZLQ
Reference Serial Number	0584002

Application & Features

Pump Type

Positive Displacement • Gear Pump

Typical Applications

- Fuel injection systems
- Lubrication systems
- Hydraulic power units

Maintenance Profile

Easy Maintenance, Field Serviceable, High Durability
