

Power Distribution Sequence Controller

This power distribution sequence controller manages and sequences power distribution, ideal for audio and video systems. It includes a digital voltage display and sequenced power outlets for stable power delivery.

Product Overview

Professional Power Management Solution

The HT-3208 is a sophisticated power distribution sequence controller designed to provide reliable and managed power delivery for professional audio and video installations. By offering sequential power control, it prevents high-inrush current surges, protecting sensitive equipment from damage during startup. The integrated digital interface ensures real-time monitoring of voltage levels, providing essential visual feedback to operators for system health and stability.

Technical Specifications

System Modes

Normal Mode • Bypass Mode

Model Number	HT-3208
Interface	Digital Voltage Display, Sequence Controller

Performance Metrics

Live Monitoring

227 V

Real-time Voltage
