

Power Plant Construction Project

This project provides engineering and construction services for a power plant, including design and procurement. It focuses on installing power generation infrastructure like cooling towers and storage tanks to ensure a reliable power supply.

Project Overview

Baghabari Power Plant Construction

This engineering and construction project focuses on the development of critical power generation infrastructure in Baghabari, Bangladesh. The scope includes full-cycle services from design and procurement to final installation and commissioning. The facility is engineered to deliver reliable power supply, fostering industrial and economic development in the region.

Scope of Services

Services Included

- Engineering Design
- Procurement
- Construction Management
- Installation
- Commissioning

Infrastructure Components

Infrastructure Components

Cooling Towers, Storage Tanks, Power Generation Units, Associated Buildings
